CHAIRMAN'S STATEMENT

It gives me great pleasure to present the 2010 Wild Salmon and Sea Trout Fisheries Statistics Report. This annual report maps trends in the stocks of salmon and sea trout since 2001 from both the commercial and recreational fisheries sectors. This report provides valuable information to fisheries' managers, scientists, policy makers and legislators and assists in the design and implementation of policies and strategies for the conservation of salmon and sea trout stocks in Ireland. The 2010 statistics show that the total number of salmon and sea trout caught by all methods was 51,637 and 2,265 respectively, which represent an increase of 45% on the total salmon catch recorded in 2009. 2010 proved an excellent year for both anglers and commercial fishermen with the increase in catches due to favourable fishing conditions, good water levels, marine survival rates and timely fish runs at key fishing periods.

The 2010 commercial catch was 14,159 salmon and 67 sea trout (over 40 cm) which represent 76.8% of the Total Allowable Catch (TAC) allocated to the commercial fishing sector. The biggest landings of commercial salmon catches were in County Kerry on the River Laune with 24.9% of the commercial catch, in County Limerick on the River Feale with 24.4% of the commercial catch; in County Cork on the River Lee with 10.2% of the commercial catch; and on the River Blackwater with 10.1% of the commercial catch.

The 2010 angling catch was 37,478 salmon and 2,198 sea trout. Thus of the 37,478 salmon caught by anglers, 22,336 were harvested and 15,142 subsequently released. For the 2010 season, 66 rivers (including rivers open only for catch and release angling) were open or partially open for fishing, and 82 rivers were completely closed. The proportions of salmon caught by recreational fishermen and commercial fishermen in 2010 were the same as the proportions in 2009, with commercial fishing accounting for 28% of the catch in 2010 (28% in 2009) and angling 72% of the catch in 2010 (72% in 2009).

These statistics assist in generating important marketing information, by providing an insight into annual angling trends, helping to form the basis of marketing strategies and develop new angling initiatives. 17,983 salmon rod licences were sold to anglers from forty six different countries. Naturally the majority of licence sales (68%) were to residents within Ireland, 11% to Northern Ireland and a further 10% of angling licence sales to UK residents with a significant number of anglers also coming from France and Germany. 2010 proved a very difficult year for all sectors of the economy and this was reflected by a decrease of 1.8% in rod licence sales compared with 2009.

I would like to commend the management and staff of Inland Fisheries Ireland, the Standing Scientific Committee and all stakeholders in the sectors for their tremendous and dedicated work in making the Wild Salmon and Sea Trout Tagging Scheme such a great success and for ensuring that the significant changes in the sector introduced in 2007 continue to be implemented in an effective and efficient manner.

Brendan O'Mahony
Chairman

Inland Fisheries Ireland April 2011

INLAND FISHERIES IRELAND

Mission Statement

To ensure that the valuable natural resources of inland fisheries and sea angling are conserved, managed, developed and promoted in their own right to generate positive return for the community and the environment.

About Inland Fisheries Ireland

Inland Fisheries Ireland is the statutory agencies responsible for inland fisheries in Ireland and operates under the aegis of the Department of Communications, Energy and Natural Resources.

The principal functions of Inland Fisheries Ireland are to:

- promote, support, facilitate and advise the Minister on the conservation, protection, management, marketing, development and improvement of inland fisheries, including sea angling,
- to develop and advise the Minister on policy and national strategies relating to inland fisheries including sea angling, and
- to ensure implementation and delivery of policy and strategies developed and agreed with the Minister

The six river basins have responsibility for conservation, protection, development, management and promotion of inland fisheries in their river basins. They have a duty to co-ordinate and co-operate in the delivery of a national fisheries service, observing principles of sustainability, biodiversity and the conservation of all species in inland water ecosystems.

Each river basin is divided up into one or more fishery districts, of which there are 17 in total. Commercial salmon fishermen are licensed to fish a particular fishery district. Angling licenses are valid to fish all river basins or a particular fishery district in where rivers are open for fishing, depending on the type of license purchased.

INTRODUCTION

The Wild Salmon and Sea Trout Tagging Scheme commenced for both commercial and recreational salmon fishing licence holders on 1st January 2001, having been provided for in the Fisheries (Amendment) Act, 1999 (No. 35 of 1999). This was followed by the introduction of Total Allowable Catches (TAC) for the commercial salmon fishing sector and bag limits for recreational anglers in 2002. The Report of the Standing Scientific Committee of the National Salmon Commission was presented to the Minister for the 2006 season outlining the scientific catch advice for the forthcoming season and the requirements to meet international obligations. Since 2007, following consultation with Inland Fisheries Ireland and the Standing Scientific Committee, the Minister sets the total allowable harvest on an annual basis for each of the rivers which exceed the Conservation Limit. From 2010 onwards the Wild Salmon and Sea Trout Tagging Scheme for both commercial and recreational salmon fishing licence holders is provided for in Section 69 of the Inland Fisheries Act, 2010 (no. 10 of 2010)

The principal aims of the Wild Salmon and Sea Trout Tagging Scheme are to provide a means of collecting accurate nominal catch statistics and estimates of salmon and sea trout stock exploitation, to develop best management strategies and to ensure these species are exploited in a manner consistent with their long-term sustainability on a national, river basin, fishery district and river basis.

Under the regulations all fishermen must affix a coded tag to each salmon (or sea trout over 40 cm) they catch and retain. A logbook entry must then be made giving the details of the fish caught. All logbooks and unused tags must be returned to River Basin Districts within a period of 7 days after the last day of the relevant fishing season, or after the licence has been in force, as set out in the Wild Salmon and Sea Trout Tagging Scheme regulations (The relevant S.I. in place for the 2010 commercial and angling seasons was S.I. No. 557 of 2009 and SI No. 323 of 2010). 2010 saw the continuation of a system of brown gill tags to be used in association with blue gill tags for the tagging of wild salmon and sea trout in certain listed rivers which had a low surplus for harvesting.

The data contained in this report is taken from salmon licences and logbook data supplied by commercial and recreational fishermen. This data is entered by Inland Fisheries staff into a national database and following this the validation, collation and analysis of the data is performed at Inland Fisheries Ireland Swords office and the final statistics report is produced.

For 2010, there was an annual bag limit of 10 fish per angler of salmon (any size) or sea trout (over 40cm). Subject to the annual bag limits an angler could take: 1 salmon (any size) or sea trout (over 40cm) per day until May 11th, with a max of three fish in total for this period; 3 salmon (any size) or sea trout (over 40cm) per day from 12th May until the end of August; 1 salmon (any size) or sea trout (over 40cm) per day from the 1st of September to the end of the season on open rivers. After the daily bag limit had been taken, anglers were permitted to fish catch and release, using single barbless hooks and there was a ban on the use of worms.

Chapter I

Summary Commercial and Angling Catch Statistics 2001 - 2010

Table 1 - Total Salmon Harvest 2001 - 2010

Year	Drift	Draft	Other Engine	Raised Angling Harvest	Total Harvest	% change on previous year
2001	197,172	30,861	5,368	26,074	259,475	
2002	179,177	23,032	4,690	29,408	236,307	- 8.9%
2003	141,222	21,100	4,552	20,888	187,762	- 20.5%
2004	120,303	19,443	3,860	26,202	169,808	- 9.6%
2005	101,231	16,735	3,214	22,361	143,541	- 15.5%
2006	70,105	13,398	2,673	22,485	108,661	- 24.3%
2007	N/A	8,843	N/A	19,430	28,273	- 73.98%
2008	N/A	8,903	N/A	22,215	31,118	+ 10.06%
2009	N/A	6,178	579	17,521	24,278	-21.98%
2010	N/A	12,261	1,898	22,336	36,495	50.32%

Table 1 shows the summary statistics for salmon harvest for all engines including rod and line for 2001 - 2010. Angling figures shown represent the raised salmon harvest (Angling salmon caught and released not included). Also presented are the percentage change on previous years.

In 2001, the total harvest of salmon by all engines was 259,475. By 2010, this had fallen to 36,495 (Table 10). This represents a decrease of c. 85.94% between 2001 and 2010.

Fig. 1 Total salmon harvest by all engines 2001 - 2010

For 2010, anglers harvested 61% of salmon, commercial fishermen accounted for 39% (Table 10). 20.9% of the 2010 total salmon harvest was taken on the River Moy, 12.5% on the River Laune, 12.4 on the River Feale and 11.1% on the Blackwater (Munster).

Table 2 - Total Sea Trout (over 40 cm) Catch 2001 - 2010

Year	Drift	Draft	Other Engine	Raised Angling Harvest	Total Harvest	% change on previous year
2001	1,787	2,192	246	1,066	5,291	
2002	874	1,083	126	1,464	3,547	- 33%
2003	712	1,024	203	997	2,936	- 17%
2004	640	929	78	519	2,166	- 26%
2005	279	535	50	770	1,634	- 25%
2006	116	311	47	543	1,017	- 38%
2007	N/A	34	N/A	331	365	- 64%
2008	N/A	59	N/A	448	507	+ 38.90%
2009	N/A	35	10	455	500	-1.4%
2010	N/A	61	6	387	454	-9.2%

Table 2 shows the summary statistics for sea trout harvest for all engines including rod and line for 2001 - 2010. Angling figures shown represent the raised sea trout harvest. (Angling sea trout caught and released not included) Also presented are the percentage change on previous years.

The total harvest for all sectors in 2001 was 5,291 sea trout (over 40 cm). By 2010, this had fallen to 454 sea trout, a drop of c. 91.42% (Table 11).

Fig. 2. Total sea trout (over 40cm) harvest 2001 - 2010.

For 2010, anglers took 85% of total sea trout, commercial fishermen 15% (Table 11). 31% of the 2010 total sea trout harvest was taken on L. Currane, Co. Kerry, 9.5% on the River Laune, Co. Kerry, and 7% on the River Moy, Co. Mayo.

Chapter 2

*Summary Commercial Catch
Statistics
2001 - 2010*

Table 3 - Commercial Salmon and Sea Trout (over 40 cm) Catch 2001 - 2010

Year	TAC	Total Reported Harvest	% of TAC
2001	-	237,626	
2002	219,649	208,982	95.14%
2003	182,000	168,819	92.76%
2004	161,951	145,253	89.69%
2005	139,900	122,044	87.24%
2006	91,367	86,650	94.84%
2007	17,305	8,877	51.30%
2008	17,314	8,962	51.76%
2009	18,211	6,802	37.35%
2010	18,530	14,226	76.77%

Table 3 shows the Total Allowable Catch (TAC) of salmon and sea trout (over 40 cm) provided for in the commercial sector in 2010 was 18,530. The total commercial combined salmon and sea trout harvest of 14,226 represents 76.77% of TAC (Table 14).

Fig 3. Total Allowable Catch (TAC) and Total Commercial Catch 2001 - 2010.

In 2010, the TAC was allocated on an individual river basis and no distinction was made between commercial and angling fisheries. The district fisheries committee in each River Basin allocated the identified surplus for each river between the commercial and angling fishery as appropriate. The figure of 18,530 above for 2010 is the TAC for commercial fishery and is the sum of the individual river quotas allocated by each district fishery committee. Some fisheries had no draft net fishery in which case the full TAC was allocated to angling.

Commercial Salmon Catch 2010

In the 2010 commercial salmon harvest, 86.6% of salmon were taken by draft nets and 13.4% by snap nets (Table 12). The total commercial salmon harvest in 2010 was 14,159.

The biggest landings of salmon in 2010 are presented in the following table (Table 4):

Table 4 - Top 5 Commercial Fisheries in 2010

2010			
District	River	No. of Salmon Harvested	% of National Harvest
Kerry	Laune	3,527	24.9%
Limerick	Feale	3,454	24.4%
Cork	Lee	1,443	10.2%
Lismore	Blackwater	1,437	10.1%
Bangor	Owenmore	800	5.7%

Table 4 shows a summary of the top 5 rivers where salmon were caught by commercial fishermen in 2010 (refer to table 12 for a full breakdown).

Commercial Salmon Catch Disposals

The table below shows the 2010 commercial salmon catch disposals:

Table 5 - Commercial Salmon Catch Disposals

Commercial Salmon Catch Disposals 2010	
Disposal Type	Commercial Nets (% total sales)
Domestic Consumption	10.5%
Guesthouse / B&B	0.4%
Hotel	0.2%
Licensed Salmon Dealers	62%
Private Sales	24%
Restaurant	2.5%
Unknown	0.4%

Table 5 shows the summary of commercial salmon catch disposals 2010. A more detailed analysis can be obtained from Table 16.

Commercial Sea Trout (over 40 cm) Catch 2010

In the 2010 commercial sea trout harvest, 91% of sea trout were taken by draft nets and 9% by snap nets. The total commercial sea trout (over 40 cm) harvest in 2010 was 67. Sea trout catches were highest in the River Laune at c. 29.9% of the national catch (Table 13).

The proportion of sea trout in the national commercial catch of salmon and sea trout in 2010 was 0.47%, down from 2% in 2001 (Table 14).

Chapter 3

Summary Angling Catch Statistics 2001 - 2010

Angling Salmon Catch 2001 - 2010

Table 6 - Salmon Angling Catch 2001 - 2010

Year	Raised Salmon Harvest	Raised Salmon Caught & Released	Total Raised Salmon Catch	% change on previous year
2001	26,074	N/a	26,074	
2002	29,408	N/a	29,408	+ 12.8%
2003	20,888	N/a	20,888	- 29.0%
2004	26,202	2,540	28,742	+ 37.6%
2005	22,361	3,032	25,393	- 11.65%
2006	22,485	6,177	28,662	+ 12.87%
2007	19,430	15,113	34,543	-20.52%
2008	22,215	13,563	35,778	+3.58%
2009	17,521	11,422	28,943	-19.1%
2010	22,336	15,142	37,478	29.5%

Table 6 shows the summary statistics for catch by rod and line for 2001 - 2010. Also presented are the percentage change on previous years. The total salmon catch by rod and line in 2010 was 37,478 (Table 21). This represents an increase of 29.5% on the 2009 salmon angling catch and an increase of 43.7% on 2001.

Angling Sea Trout (over 40 cm) Catch 2001 - 2010

The total raised sea trout (over 40cm) catch in 2010 was 2,189 (Table 24). This represents a decrease of 13.97% on the 2009 sea trout angling catch (over 40 cm).

Table 7 - Sea Trout Angling Catch 2001 - 2010

Year	Raised Sea Trout Harvest	Raised Sea Trout Caught & Released	Total Raised Sea Trout Catch	% change on previous year
2001	1066	N/A	1066	
2002	1464	N/A	1464	+ 37.3%
2003	997	N/A	997	- 31.9%
2004	519	N/A	519	- 47.9%
2005	770	N/A	770	+ 48.4%
2006	543	N/A	543	- 29.5%
2007	331	N/A	331	- 39.0%
2008	448	1329	1777	+ 436.9
2009	455	2,100	2,555	+ 43.78%
2010	387	1,812	2,198	-13.97%

Table 7 shows the summary statistics for sea trout catch by rod and line for 2001 - 2010.

Angling Licences Sold and Logbooks Returned 2001 - 2010

17,983 salmon rod licences were sold in 2010, a decrease of 1.81% on 2009 licence sales (Tables 17-20). Anglers returned 12,813 logbooks to the River Basin Districts in 2010, with a national return rate of 71%, up 1% on 2009 logbook returns (Tables 17).

Table 8 - Salmon and Sea Trout Licence sales 2001 - 2010

Year	Licences Sold	Logbooks Returned	% Return
2001	32,814	14,238	43%
2002	35,024	18,116	52%
2003	31,809	18,088	57%
2004	30,807	17,955	58%
2005	28,738	17,682	62%
2006	27,341	18,554	68%
2007	19,986	12,962	65%
2008	20,061	13,917	69%
2009	18,314	12,890	70 %
2010	17,983	12,813	71%

Table 8 shows the summary statistics for the total numbers of rod licences sales from 2001 - 2010 and the numbers and percentage of logbooks returned by salmon anglers.

Salmon Angling Catch 2010

Over one quarter of all salmon nationally (25.2%) were caught on the River Moy System, which had a raised catch of 9,446 salmon (Table 21). Salmon were caught at 86 rivers and locations in 2010. The top three salmon producing water systems made up 43% of the national salmon catch by rod and line in 2010 (Rivers Moy, Blackwater (Munster) and Suir).

Sea Trout (over 40 cm) Angling Catch 2010

One fifth of all sea trout nationally (20%) were caught by rod and line on the River Slaney (Table 24) with a reported catch of 441 sea trout (over 40 cm). Sea Trout were caught at 78 rivers and locations in 2010. The top three sea trout producing water systems made up 45.8% of the national Sea Trout catch by rod and line in 2010 (River Slaney, L. Currane and River Boyne).

Catch per Angler

An analysis of the distribution of the salmon catch indicated that 6,469 anglers harvested salmon in 2010 (Table 53), an increase of 16% on 2009. 2,559 anglers caught and released salmon in 2010 (Table 52) an increase of 22% on 2009. These figures are based only on those anglers who returned logbooks.

Catch and Release Estimates

Based on logbook returns to the River Basin Districts, catch and release estimates were compiled for 2010. A total of 15,142 salmon were caught and released (Table 21) across all river basins and 22,336 salmon (Table 21) were harvest by anglers. The total catch of both harvested and caught and released salmon by Rod and Line is 37,478 giving a national catch and release rate of 40%.

14.54% of all salmon caught and released, were released on the River Suir (Table 21) which had a catch and release of 2,202 salmon. The River Moy accounted for 12.03% of all salmon caught and released and the River Blackwater (Munster) accounted for 11.69% of all salmon caught and released. Salmon were caught and released on 73 rivers and locations in 2010. The top three rivers where salmon were caught and released made up almost one third (38.27%) of the national catch and release by rod and line in 2010 (Table 21).

Angling Catch of Spring Salmon

An assessment on the number of salmon caught between 1st January 2010 and 31st May 2010 was made to estimate the number of spring (or multi-sea winter) salmon being taken by rod and line (Table 22). The catch indicates that a total of 3,515 spring salmon were caught in 2010, of which 1,255 were released and 2,260 harvested. The figure of 3,515 spring salmon catch represents c. 9.38% of the total catch (37,478). A total of 715 spring fish were caught on the River Moy system and 371 spring fish for the Blackwater (Munster) in 2010 (Table 22).

Angler Nationality

Anglers from 46 different countries held salmon and sea trout rod licences in 2010. 68% of anglers were from Ireland, 11% from Northern Ireland, 10% from Great Britain (England, Scotland and Wales), 3% from France and 3% from Germany (Table 19 - 20).

Table 9 - Summary Angler Nationality 2009 - 2010

	Nationality	2009	2010	% change on previous year
1	Ireland	12,138	12,283	1.19%
2	Great Britain	1,900	1,721	-9.42%
3	Northern Ireland	2,028	1,938	-4.44%
4	France	674	597	-11.42%
5	Germany	469	457	-2.56%
6	USA	207	200	-3.38%

Table 9 shows a comparison of the top 6 angler nationalities for 2009 and 2010

Angling Catch by Month and Capture Method

The salmon angling catch by month and capture method for the top salmon producing rivers systems in 2010, namely the Moy, Blackwater (Munster), Suir, Ballysadare, Nore, Corrib, Owenmore, Feale, Mulkear (Shannon), Laune, Drowes, Boyne, Bandon, Lee (Cork), Easkey, Owenea, L. Currane, Ilen, Fane, Glen, Erriff, Duff, Inny(Knockmoyle), Owenduff, Roughty, Bundorragha, Eany, Crana, Owenglin, Caragh, Ballynahinch, Maine, Gweebarra, Garvogue, Glyde, Drumcliffe, Dawros, Coomhoola, are presented in Fig 7- Fig 44.

Unknown (W)	999	WRFB	10	11

Tables 41-43 show the reported number of salmon and sea trout (over 40cm) harvested as well as those caught and released by rod and line in the Western River Basin - Galway in 2010 as determined from angling logbook returns. The tables also shows the raised catch to take into account those fish captured for which no logbook was returned. River names and codes are defined by the Ordnance Survey of Ireland, Rivers and their Catchment Basins, 1958.

Appendix iv

Glossary of Terms used in Report

“River Basins” and “Fishery Districts”

There are 7 River Basins and 17 fishery districts. The River Basins are made up of fishery districts as follows;

River Basin District	Fishery District
Eastern River Basin District (ERBD)	Dundalk
	Drogheda
	Dublin
South Eastern River Basin District (SERBD)	Wexford
	Waterford
South Western River Basin District (SWRBD)	Lismore
	Cork
	Kerry
Shannon River Basin District (ShRBD)	Limerick
Western River Basin District - Galway (WRBD)	Galway
	Connemara
	Ballinakill
Western River Basin District - Ballina (WRFB)	Bangor
	Ballinakill
	Sligo
North Western River Basin District (NWRFB)	Ballyshannon
	Letterkenny

Logbook means a salmon and sea trout commercial fishing logbook or a salmon and sea trout angler’s logbook. The logbook will be issued along with a salmon and sea trout commercial and/or anglers licence. The logbook must be completed by the licence holder. The licence holder must populate the logbook with his/her fishing effort for salmon and sea trout including days fished where there was no catch.

Logbook Returns

Completed Logbooks are returned to the river basin district which issued the licence not later than 28th August for commercial fishing logbooks and no later than 19th October for angler’s logbooks of the year to which they relate.

Harvest

This is the number of salmon and/or sea trout “caught and retained”, “caught and tagged”, “caught and killed”. All commercially caught salmon and/or sea trout are harvested. All rod caught salmon harvested must be tagged.

Caught and Released

This is the number of salmon and/or sea trout caught by rod and line in specified waters, handled carefully and immediately returned alive to those waters.

Reported Catch

This is the actual salmon or sea trout catch taken directly from angler's logbook. Commercial catch represents the reported catch only as 100% of logbooks are returned by commercial fishermen.

Adjusted/Raised Catch

The assessment of wild salmon and sea trout angling catches includes an adjustment to the reported angling catch to take into account the numbers of fish caught by anglers who have not returned their logbook. Raised catch for individual rivers are rounded up or down to the nearest whole number therefore the sum catch of all rivers will appear to be out by +or- 0.1%.

Small

The method for adjusting/raising the reported angling catch follows investigations published by Small (1991). Commercial catch is not adjusted as 100% of logbooks are returned by commercial fishermen

Raising Factor

The Wild Salmon and Sea Trout statistics are generated based on the logbook returns obtained from recreational salmon and sea trout anglers. The reported catches taken from logbooks are raised to provide an adjusted/raised catch to take account of those anglers who did not return logbooks. This reported catch is multiplied by a raising factor which is obtained based on a formula $((0.3/X)+0.7)$ called Small 1991. X represents the total licence sales divided by the total logbooks returned by anglers.

Spring Salmon - Salmon which are caught between 1st January and 31st May.

Returning from the sea after spending two or more years, 2 sea-winter or multi-sea winter salmon. These older fish are larger and usually return in the springtime and are often referred to as spring salmon.

Grilse - Salmon which are caught between 1st June and 30th September, returning having spent one year at sea (1 sea-winter salmon).

Draft Net

Draft Net includes a single wall of netting attached to a floating head rope and a weighted ground rope, designed so that a bag is formed into which the catch is drafted or hauled, for the purpose of taking or fishing for, or attempting to take or fish for, salmon or sea trout.

Drift Net

Drift Net includes a single sheet of netting attached to a floating head rope and a weighted ground rope, designed to drift freely at the surface of waters for the purpose of taking or fishing for, or attempting to take or to fish for, salmon or sea trout, to which net or ropes no weights or anchoring devices are attached which in any way hinder or prevent the free movement of the net in those waters.

Other Fishing Engine

Other fishing engine - means any fishing engine not being a drift net, a draft net, a snap net or rod and line, capable of being used for the purpose of taking or fishing for, or attempting to take or to fish for, salmon or sea trout.

Total Allowable Catch (TAC)

The maximum number of gill tags that may be issued, in respect of wild salmon and sea trout which may be lawfully taken, by the holders of fishing licences, in a river or a fishery district.

Salmon and Sea Trout Anglers Licence

A licence - Annual licence, entitles you to fish in all 17 fishery districts (excluding the Foyle area) in which rivers are open for fishing for the duration of the season.

B licence - A district licence entitles you to fish in one specified fishery district only (excluding the Foyle area) in which rivers are open for fishing for the duration of the season.

P licence - A juvenile licence entitles you to fish in all 17 districts (excluding the Foyle area) in which rivers are open for fishing for the duration of the season.

R licence - A twenty one day licence, entitles you to fish in all 17 fishery districts (excluding the Foyle area) in which rivers are open for fishing.

S licence - A one day licence entitles you to fish in all 17 fishery districts (excluding the Foyle area) in which rivers are open for fishing.

W licence - A special local licence for selected waters

X licence - Foyle Area extension licence -

(Additional permit may be required in association with a state licence for certain lakes/rivers)

River System Number

River names and code numbers are as per the Ordnance Survey of Ireland, Rivers and their Catchment Basins, 1958.
